## MERIT OPTICAL ATTACHMENT

Are you having that eye problem that eventually catches up with all of us? The silhouette targets are clear and sharp but the sights are fuzzy. Or, the sights are sharp and clear but the silhouette targets are fuzzy. The Merit optical attachment has been legal by IHMSA rules for several years. Using it will dramatically increase the range of focus for your eyes, allowing the silhouette targets and the sights to be clearly defined. Also, the new attachment aperture is adjustable to handle changing light conditions and individual eye requirements.

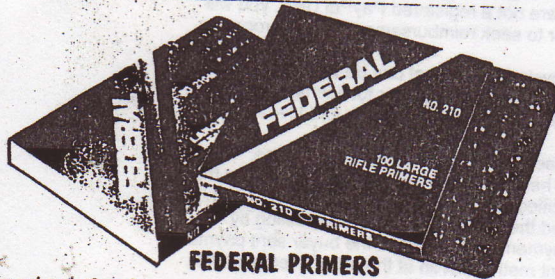

We have stocked the Merit Optical Attachment for the convenience of IHMSA members.

# SHOOTING STEEL

SHOOTING STEEL is the definitive work on the IHMSA sport of handgun metallic silhouette.

SHOOTING STEEL contains all the silhouette load data and special test reports ever published in THE SILHOUETTE worthy of the name. Many, many photos are included. Two years in the making by THE SILHOUETTE Staff. Introduction by David Bradshaw.

The first section of 12 pages contains the history of IHMSA, its beginning, notes on its rules, guns and silhouette cartridges, where the game started and when, with historical notes on the sport where it began in Mexico.

SECTION 2, 17 pages of highlights from the first three issues of THE SILHOUETTE (which are very rare) published in 1977. Results from the first matches ever sanctioned by IHMSA with notes and photos of the first handgun metallic silhouette match ever held which was in Tucson, Ariz., on Sept. 20-21, 1975, as well as the second national championships held at El Paso, Texas in October of 1976, where IHMSA was founded.

SECTION 3, 10 pages of the outstanding silhouette records that have been set starting with Josie Engle's 1980 standing record of 36x40 plus Dave Whitman's first revolver 40x40, the first production 40x40 and so on. The load data for all of these record setting performances is included.

SECTION 4, 34 pages of load data and test reports for the T/C Contender. Everything ever published in THE SILHOUETTE that is worthwhile is represented, including all calibers; .221 Fireball, .222 Remington, .25/35 Winchester, .30 Herrett, .30-30 Winchester, .357 Herrett, .35 Remington, 6.5mm TC, 7mm TC, 7mm International Rimmed (7-R), 7mm Merrill, .357 Mag., .357 Super Mag, .375 Super Mag, .50/70 Government and a number of wildcat cartridges as well.

SECTION 4, 66 pages of Revolver load data and test reports by Bradshaw, Briggs, Taffin, Joe Wright and others. This information and load data is unique to the silhouette game, and like virtually all the other information in SHOOTING STEEL, cannot be found in any of the commercial loading manuals or gun magazines. Every caliber used in IHMSA silhouette shooting is included such as .357 Mag, .357 Super Mag, .375 Super Mag, .41 Mag, 44 Mag, .44 Super Mag, .454 Mag and .454 Casull.

SECTION 5, 38 pages of Unlimited silhouette calibers and test reports by Bradshaw, Briggs, Taffin, Joe Wright and others. Calibers range from .221 Fireball, 7mm BR, 7mm IHMSA and all the other IHMSA calibers, .250-3000 Savage, 7x57, .35 Remington, .308 FL, 7mm/.308, the Pachmayr Dominator in 7mm TC, 7mm IHMSA, .357 Super Mag and finally including the .22 Unlimited Chipmunk.

SECTION 6, 45 pages of special reports by the best silhouette shooters and writers in IHMSA ranks. This includes everything from Bradshaw, Gates, Taffin and others. Everything from checking cylinder alignment of revolvers, momentum knockdown formulas and everything else of special interest to IHMSA silhouetters.

SECTION 7, 17 pages of all the CAST BULLET load data and reports by Zimmerman, Matthews, Smith and others that have appeared in THE SILHOUETTE over the past ten years. All calibers included, a complete litany of all the silhouette cast bullet data known.

SECTION 8, 22 pages of the most important editorials that have appeared in THE SILHOUETTE since day one.

SECTION 9, 8 pages of safety reports by David Bradshaw, Chairman of the IHMSA Safety Committee.

SECTION 10, 5 pages of reports on loading presses and tumblers by Bradshaw, Briggs and others.

SECTION 11, 4 pages of gunsmithing tips by Frank Scotto and others.

SECTION 12, 7 pages on sights, sight adjustments, shooting glasses, spotting scopes, spotting tips, etc. by Steve Zegar, Bradshaw, Bill Bartram and others.

SECTION 13, 7 pages of Silhouette tips by Paul Zint.

SECTION 14, 10 pages of handgun hunting by IHMSA members with photos and trophies.

SECTION 15, 4 pages of Silhouette poetry by Mary Scotto and others.

SECTION 16, 7 pages of IHMSA silhouette shooting around the world, Australia, Norway, France, Finland, Etc.

SECTION 17, 5 pages on the establishment of the first Permanent Range.

SECTION 18, 80 pages covering the highlights of ALL the IHMSA INTERNATIONAL CHAMPIONSHIPS starting with the first Internationals in 1977 and complete through the 1985 Internationals, with a final update on the IHMSA Silhouette game from Aqua Field Magazine.

The Table of Contents is fully detailed so you can easily locate the exact data you need.

SHOOTING STEEL is a gold mine of all the valuable silhouette load data, test reports and information that gives you all you need to know about the sport of IHMSA Handgun Metallic Silhouette.

It's all yours, all 436 pages for \$18.95 plus shipping.

### REDDING PROFILE CRIMP DIES

For the revolver shooter who wants a positive crimp on his cartridges that is not possible with a normal seating die.

A positive crimp prevents the rest of the bullets from moving forward out of the case from the inertia recoil of firing a revolver — and thus locking the cylinder.

The PROFILE CRIMP die provides a tighter, more uniform roll-type crimp as a final step after the bullets have already been seated to the correct depth.

	List	Member
.357 Magnum Profile Crimp Die .....	\$21.00	\$17.55
.357 Super Mag Profile Crimp Die (alias Maximum) .....	\$21.00	\$17.55

 Box 1509  
 Idaho Falls, ID 83403

### DAN WESSON SIGHT BLADES

We offer the full range of Patridge-type front blades for Dan Wessons as follows, PLUS the RSB-D .080 rear notch blade as a separate item (for guns having the new style rear sight, but equipped with the wider .125 rear notch.)

All Patridge front blades and the .080 RSB-D rear blade are available from THE SILHOUETTE at a member cost of \$8.50 each.

PS-2, .100 wide, .275 high (used with the .080 rear notch blades.)

PS-5, 100 wide, .300 high (used with the .080 rear notch blades.)

PS-6, 100 wide, .350 high (used with the .080 rear blade.)

### THE SILHOUETTE

For the benefit of Silhouette subscribers, we are printing our policy's on orders for goods. Our staff promptly and efficiently processes all orders that come to The Silhouette. If we do not have the item in stock, your check will not be cashed (checks will be cashed when the goods are sent) and we will notify you.

If we are unable to ship your merchandise due to delays at the factory, we will hold the back order or return your check, whatever you may desire.

Because The Silhouette is not a authorized factory warranty station, we recommend that you send any damaged goods, other than shipping defects, back to the respective manufacturers for repair or service.

Each individual is responsible to see that he orders the proper merchandise. A 10% restocking and rehandling fee will be charged on merchandise that is returned.

We thank you for your orders and cooperation.

BRAND NEW SILHOUETTE DIGEST by Elgin Gates. Special member price \$9.95, shipped postpaid. The Silhouette, Box 1509, Idaho Falls, ID 83403. Phone 208-524-0880.

.375 SUPER MAG Winchester brass. IHMSA headstamp. Ready to load and shoot. Member price for 100 rounds (2 boxes of 50) \$31.00 plus \$3.00 UPS shipping. The Silhouette, Box 1509, Idaho Falls, ID 83403. Phone 208-524-0880.

## Hornady

### Crimp-On Gas Checks

Before sizing on bullets

After sizing on bullets

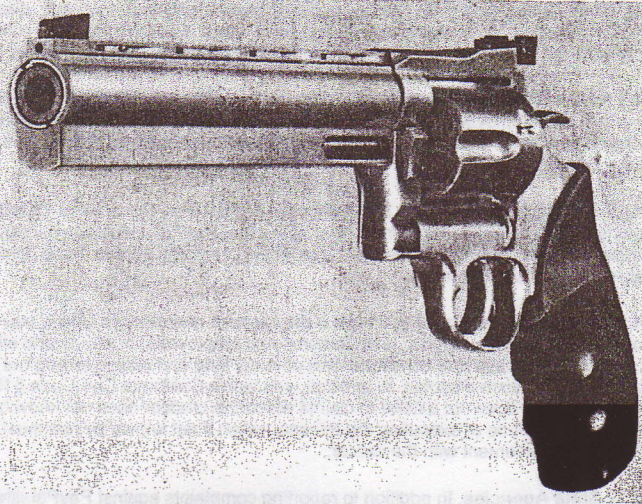

For shooters who prefer to cast their own bullets, we offer these Hornady crimp-on gas checks, the best available. When sized, the gas check crimps permanently to the bullet. It is the most widely used gas check on the market today.

Order by caliber, please. Prices are for boxes of 1000.

## HORNADY 240 GR JTC SILHOUETTE BULLETS FOR THE .445 SUPER MAG

	List	Member
Per box of 100 .....	\$15.85	\$10.25
Add \$2.00 per box for packing and shipping .....		\$ 2.00
Total per box of 100 .....		\$12.25

For shipping, packing and insurance, please see the order form in the center section of The Silhouette, per standard Silhouette policy. Please add \$2.00 per box of bullets for shipping.

One of the more interesting things that has been brought out in testing and use of the .445 Super Mag is the outstanding accuracy, not only with full .445 loadings, but with regular .44 mag loadings. Also interesting is the versatility of the .445 for serious silhouetting, handgun hunting and even field pistol competition using regular .44 mag brass or even .44 special brass.

Upon request a copy of Bartram's complete article on field testing and load data with the .445 Super Mag brass can be sent with your order. Likewise, if you want the ultimate in high power, high velocity loadings for hunting, you will need to use brass made from 30-40 Krag brass as described by Bartram. This load data from the May 1988 issue of THE SILHOUETTE also will be available on request.

WE URGE OUR CUSTOMER TO USE CAUTION AND COMMON SENSE WHEN WORKING UP LOADS FOR THEIR .445 SUPER MAGS. WE FURTHER SUGGEST THAT, USING BARTRUM'S DATA THAT YOU START AT LEAST 20 PERCENT UNDER WHAT HE USES AND SLOWLY WORK UP. WE SUGGEST DOING THIS BECAUSE THE CONDITIONS AND EACH GUN ARE INHERITLY DIFFERENT, THEN WHEN BILL DID HIS TESTING.

VALID FFL NEEDED FOR GUN ONLY

# Redding Now Manufactures SAECO Quality Bullet Casting Products

LIST \$54.00, SHOPPER \$39.50

## SAECO PRECISION BULLET MOULDS

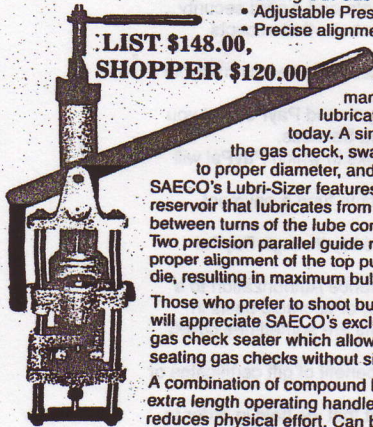

All SAECO moulds are machined from solid cast iron blocks one cavity at a time. Using the same cutting tool (cherrie) for each cavity on digital equipment guarantees that each cavity duplicates the previous one. You don't need to pay a premium for matched cavities. SAECO even developed its own blend of copper alloyed pearlitic cast iron for tight grain structure, dimensional stability and extended life. The steel sprue plates are held firm against the mould blocks by high-temperature Inconel spring washers to insure uniform bullets with square bases.

Mould handles are ductile iron castings with solid oak grips. They should be ordered separately and fit all SAECO mould blocks (1-8 cavity). Mould Handles

## SAECO LUBRI-SIZER

- Solid cast iron body
- Swing Out Gas Check Seater
- Adjustable Pressure Lubricant
- Precise alignment

LIST \$148.00, SHOPPER \$120.00

Considered by many to be the finest lubricator/sizer available today. A single stroke seats the gas check, swages the bullet to proper diameter, and lubricates it. SAECO's Lubri-Sizer features a pressurized reservoir that lubricates from 20 to 50 bullets between turns of the lube control handle. Two precision parallel guide rods assure proper alignment of the top punch and sizing die, resulting in maximum bullet concentricity.

Those who prefer to shoot bullets "as cast" will appreciate SAECO's exclusive swing out gas check seater which allows the option of seating gas checks without sizing.

A combination of compound leverage and extra length operating handle substantially reduces physical effort. Can be used with either hollow or solid stick lube.

Sizing Dies and Top Punches are not included and should be ordered separately according to caliber and bullet design.

SAECO SIZING DIES  
LIST \$25.50,  
SHOPPER \$18.75

SAECO sizing dies are made with a unique prelead that fits the "as cast" bullet diameter for a depth of approximately .3 inch. This special entrance throat insures that the bullet feeds into the sizing diameter in absolute straight alignment. The constriction between the two diameters is a gentle taper which eliminates lead shearing and sizes the bullet concentrically.

The dies are finished by internal honing known as micro-finishing which produces a mirror like finish and a sizing hole that is perfectly round. Your bullets will look like polished silver with no lead shavings.

	.265	.310	.358	.429
	.266	.311	.359	.430

	.286	.314	.378	.452
	.308	.356	.410	.454
	.309	.357	.411	.455

TOP PUNCHES LIST \$9.50, SHOPPER \$7.80

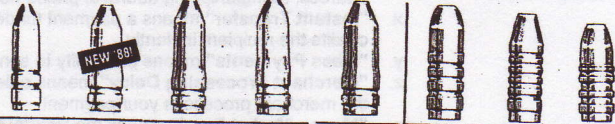

SAECO's exclusive tapered shoulder assures positive alignment with die body. A single Top Punch may be used interchangeably with several bullets of similar design. See Mould Table for top punch number.

SAECO TRADITIONAL-Rifle Lubricant This is the NRA formula for Alox and beeswax. We use natural yellow beeswax, not synthetics. Formulated to prevent leading and improve accuracy at higher velocity levels.

Available in Solid or Hollow Sticks

## SAECO LEAD HARDNESS TESTER

LIST \$108.00 SHOPPER \$84.50

## SAECO LEAD HARDNESS TESTER

A precision instrument to accurately determine the hardness of a bullet casting alloy. A SAECO Lead Hardness Tester will pay for itself many times over by allowing you to convert inexpensive scrap lead of unknown composition into casting alloy of known and reproducible hardness. It provides a standard by which you can check the quality of purchased cast bullets.

The SAECO Lead Hardness Tester measures alloy hardness by determining the depth of penetration of a hardened steel indenter into a bullet. Relative hardness of the bullet is read off a vernier scale.

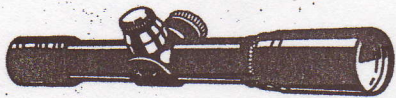

The vernier scale is calibrated in arbitrary units from 0 for pure lead up to a SAECO hardness of 10 for use in checking the hardness of heat treated bullets. We have found that a SAECO hardness of at least 6 is required for medium velocities in handguns and a SAECO hardness of over 8 for Magnum handgun and gas check rifle bullets. As a point of reference, wheelweights vary in composition and hardness but usually test between 7 and 9, while linotype registers 10 or better.

	Relative Hardness SAECO	Brinell (Approx.)
Pure lead	0-1	5
1:20 tin: lead	7-8	10
5:5:90 tin: antimony: lead	8-9	15
2:6:92 (Taracorp) magnum alloy	8-9	16-17
5:10:85 (linotype)	9-10	22

### RUGER® SUPER REDHAWK® DOUBLE-ACTION REVOLVER

.44 Magnum Caliber

**NEW!**  
**STAINLESS STEEL**

Incorporates mechanical design features of the GP100® and the Redhawk revolvers. Heavy extended frame incorporates the Ruger integral scope mounting system. Hammer spur has been lowered to provide clearance for frame-mounted scope.

Ramp front sight with interchangeable insert sight blades. Adjustable rear sight with white outlined square notch blade. Cushioned grip panels with Goncalo Alves wood inserts. Ruger rings included. Weight (7 1/2" barrel) approx. 53 ounces.

As everyone knows, the Stainless Ruger Super Redhawk has been announced for the past two years, but had been a bit slow in coming through.

Ruger has expressed in how the long barrel model (9 1/2-inch barrel) will perform in the silhouette game.

These are available on a first-come, first-served basis to IHMSA members only. The supply is very limited.

# THE DAN WESSON .357 and .375 SUPER MAGS

The latest state-of-the-art in silhouette revolvers with the brand new wood target grip and the best silhouette sights.

Since this model was introduced in 1983 it has steadily forged ahead to the point where it now dominates the top end of the IHMSA revolver competition.

In its first year, 1983, Lon Pennington used the DW .357 Super Mag to fire a perfect Revolver 80x80 to win the title of International Revolver Champion. He has repeated his perfect 80x80 score in 1985 and in 1986 to become the International Revolver Champion four years in a row. (He only shot a 79x80 in 1984.)

These DAN WESSON Silhouette revolvers, the Blue .357 Super Mag 40-V8S, the Stainless 740-V8S and the Blue .375-V8S, were built by Dan Wesson on special contract for THE SILHOUETTE.

The Silhouette's new 420 page publication, SHOOTING STEEL, contains all the history on the development of the .357 and .375 Super Mag cartridges and the long cylinder concept by Elgin Gates.

At the 1987 INTERNATIONALS in Oak Ridge, Tennessee, two 80x80s were shot in Revolver International class with .357 DW Super Mags. The class scores were as follows:

- R-Int — 1st, 2nd, 4th, 5th
- R-AAA — 1st, 2nd, 3rd, 5th
- R-AA — 2nd, 3rd
- R-A — 1st, 2nd, 3rd, 4th, 5th

By ordering through THE SILHOUETTE, the .080 silhouette rear blade is installed PLUS your choice of a PS-2 (.275 high) OR a PS-5 (.300 high) front sight blade at NO EXTRA CHARGE.

Sorry, target grips only

# FEDERAL

## 7mm/.223 MATCH GRADE NICKELED BRASS

### FOR 6.5mm FANS

For those who shoot the 6.5mm TC and any other gun chambered for the 6.5mm/.223 cartridge, this brass works perfectly. All you have to do is run the 7mm/.223 cases through your 6.5mm Neck die or Full Length die and presto, you have perfect 6.5mm/.223 brass ready to load and shoot.

The new FEDERAL 7mm/.223 nickeled match grade brass.

## BRAND NEW FACTORY MADE

It has taken years of planning and effort to overcome all the obstacles in getting a special contract run of 250,000 rounds of match grade, nickel-plated brass, factory made by FEDERAL for all contenders chambered for the 7mm TC, and all other pistols chambered for the 7mm/.223. The brass has just been received and is on hand for immediate delivery.

There are three designations for this cartridge, all of them meaning exactly the same thing. 7mm TC for the Thompson/Center Contender; 7 x 45, the metric designation; and 7mm/.223 which is the correct and original generic name of the cartridge as developed in October of 1975 as a result of the new handgun metallic silhouette game. Thompson/Center would be the first manufacturer to chamber production guns for this cartridge in 1979. In any event, all three designations are one and the same.

Are you tired of the hassle of expanding and forming brass for your Contender and any other pistol chambered for this cartridge, from .223 Military or commercial brass, and all the lop-sided necks, uneven case mouths and split cases that go with it? Not to mention such tasks as reaming the primer-pocket crimp out of military brass and so on and on and on? You won't have to anymore.

This special run of nickel-plated unprimed match grade brass, factory made by Federal on special contract with THE SILHOUETTE, is now a reality. It is all of one lot number. It is ready to load and shoot.

The headstamp reads IHMSA 7mm/.223. It is packed in boxes of 20, with the box ends reading 7mm/.223 INTERNATIONAL HANDGUN.

As all 7mm TC shooters know, neither military or commercial .223 brass is made to the correct length specification of 1.750, and in the process of expanding it to 7mm, you actually shorten the brass down to about 1.730-1.735 leaving a gap in the neck-throat area. This gap may not affect accuracy too much, but it certainly doesn't improve accuracy.

This special run has been made to the original, precise dimensions established by Elgin Gates in October of 1975, and the length is a full 1.750-1.752, thus allowing you to deburr the tiny factory-tumble rollover on the lip of the mouth inside and out and your new brass is ready to load and shoot, and is the correct length. After a firing or two, those that like uniform case length and absolutely square case mouths, can trim off .002-.003 of the case mouths and have a complete set of perfect 1.750 brass to properly fit the chamber for the first time ever.

For the record, Thompson/Center does not recommend the use of military brass in their 7 TC barrels.

WHY? Far too many 7 TC barrels have been sent back to the factory over the years for exchange or refund with complaints running the gamut from sticky brass to separated cases, non-fitting brass and so on and on. At least 98% of said complaints could be traced back to the use of various and sundry types of military brass, NOT the barrels themselves.

There is hardly a shooter in IHMSA who has not been forced out of a match, especially championships, by the failure or malfunction caused by military brass used in their 7mm/.223 guns, both production and unlimited.

Use the best. Save yourself the hassle and the problems that often come from using military and other off-breeds of brass.

# RELOADING POWDERS

## H4227 and H4198

H4227 is the fastest burning of the IMR series. Well adapted to Hornet, light bullets in 222 and all bullets in 357 and 44 magnum pistols. Cuts leading with lead bullets. H4198 was developed especially for small and medium capacity cartridges.

## H4895

4895 may well be considered the most versatile of all propellants. It gives desirable performance in almost all cases from 222 Rem. to 458 Win. Reduced loads, to as low as 3/4 of maximum, still give target accuracy.

## H4831 - NEWLY MANUFACTURED

Here is a new batch of the original 4831. The most popular of all powders. Use same loading data as our original surplus powder. Outstanding performance with medium and heavy bullets in the 6mm's, 25/06, 270 and magnum calibers.

## SPHERICAL H335 (U.S. GOVT. SURPLUS)

Similar to BL-C(2), H335 is popular for its performance in medium capacity cases, especially in 222 and 308 Winchester.

## H110

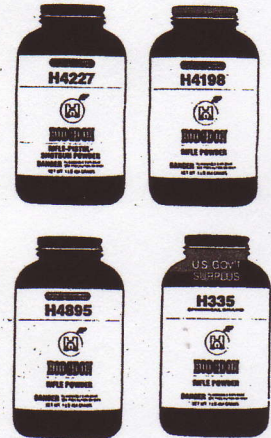

A spherical powder made especially for the 30 M1 carbine. H110 also does very well in 357, 44 Spec., 44 Mag. or 410 ga. Shotshell. Magnum primers are recommended for consistent ignition.

For the convenience of members who have previously been using original tried and true HODGDON, WINCHESTER and HERCULES powders, we offer the following:

All are newly manufactured commercial reloading powders.

## HODGDON POWDER CO.

### FACTORY LIST MEMBER

HODGDON H-322 New Mfg	8 lb. jug	\$129.00	\$90.50
HODGDON H-4227	8 lb. jug	\$129.00	\$90.50
HODGDON H-4198	8 lb. jug	\$129.00	\$90.50
HODGDON H-4895	8 lb. jug	\$129.00	\$90.50

## THE NEW DAN WESSON 22 REVOLVER

At the NRA show this spring, Robert Gates stopped by the Dan Wesson booth. During the course of the discussion, he asked if Dan Wesson had made a 10 inch .22. The President of Dan Wesson carefully explained that a number of years ago, there had been a printing mistake in their catalogue and it listed a ten inch revolver. He further explained that Dan Wesson had in fact never made a ten inch .22, and had no plans to make a .22 with that barrel length in the future. Robert than asked "Well why don't you bring out a .22 revolver with a ten inch barrel and of course with silhouette sights!" The reply was "Well Bobby, we will take the matter under consideration."

We would like to take this opportunity to thank the folks at Dan Wesson, Ed, Bob, Paul and the many others that put the time in to bring out a quality product for silhouette shooters, both in America and abroad.

Because of the devotion at Dan Wesson to Silhouette shooters, The Silhouette is proud to announce that we have in stock for immediate shipment, all four models of the new DAN WESSON .22 Long Rifle 10 inch revolver.

Elgin Gates, inventor of the Super Mag series of cartridges, 42 in all, holds test prototype of the new Dan Wesson .445 Super Mag which is the newest of the Super Mag series to be released.

We have a limited run of normal serial numbers followed by a special run of Dan Wesson's with the serial number prefix of ETG in honor of the late Elgin T. Gates.
